SHIRIN-YOKU

“forest bathing”

The Japanese practice of Shirin-Yoku is the practice of immersing in the atmosphere of the forest, connecting with it with all senses and restoring one's energy through the connection.

This installation creates the sensation of Shirin-Yoku in the middle of the city, by enclosing the seated individual in a private space with the only bit of nature available in the space of the square.

Construction detail

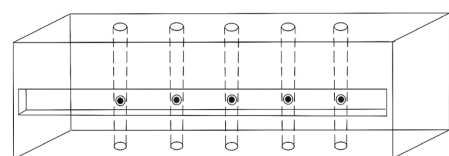

FABRIC ATTACHEMENT

The fabric is screwed to the bamboo poles using 6x30 mm screws.

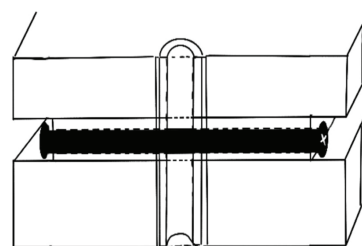

BASE CONSTRUCTION

The base is constructed using molded concrete blocks, with fitted holes for each bamboo pole. 1 block holds 3 poles.

SECURING MECHANISM

The bamboo poles are secured into the mortar blocks with 6x120 mm screws. The molded block provides a narrowed middle section, which makes it possible for the screw to be covered with a concrete layer after it has been secured.

MATERIALS

Bamboo poles (dim 3-4cm)	300 cm, rad 2 cm, 40 units
Semi-transparent fabric	25m ²
Concrete	350kg
Short screws	6mm x 30mm, 80 units
Long screws	6mm x 120mm, 80 units

BUDGET

MATERIAL	PRICE PER UNIT	TOTAL PRICE
Bamboo poles	3.99€	159.6€
Semi-transparent fabric	2.67€	40.0€
Concrete	1.95€	27.3€
Short screws	0.0318€	2.544€
Long screws	0.165€	13.2€
Total amount needed		242.644€
